Professional Summary

Dedicated and results-driven Database Developer with a solid background in designing, implementing, and maintaining complex database systems and optimizing data pipelines and systems to enable data-driven decision-making. Proficient in a wide range of database management systems, including SQL Server, Oracle, MySQL, and PostgreSQL. Experienced in database architecture, data modeling, and performance tuning to ensure optimal data retrieval and storage efficiency. Skilled in troubleshooting database issues, implementing security measures, and ensuring data integrity through robust backup and recovery strategies. Collaborative team player with strong communication skills, able to work closely with cross-functional teams to understand business requirements and translate them into effective database solutions. Committed to staying current with emerging database technologies and best practices to deliver high-quality, scalable, and secure database environments. Seeking to leverage my expertise to enhance data management and contribute to the success of forward-thinking organizations.

Summary of Skills

- Strong experience in database design and development using SQL Server
- Excellent knowledge of T-SQL, stored procedures, triggers, functions, and views
- Good understanding of database performance tuning, indexing, and query optimization
- Hands-on experience in database migrations, backups and recovery, and disaster recovery planning
- Ability to design and implement database security, across controls and auditing.
- Proficient in data modeling, data warehousing, and business intelligent solutions
- Good knowledge of cloud database platforms like Microsoft Azure.
- Experience in leading database projects and providing guidance and mentorship to junior developers.
- Good understanding of front-end development technologies such as HTML, CSS, JAVASCRIPT, C#
- Proficient in SQL Server Integration Service solutions
- Excellent knowledge in PowerBI, SQL Report writing, and Tableau
